# Northstar audit-readiness review

A realistic, completely fictional evidence pack for testing cross-document reasoning, traceability, prioritization, and false-positive control.

|               |                                                                               |
|---------------|-------------------------------------------------------------------------------|
| Company       | Northstar Precision Systems (fictional)                                       |
| Scenario date | 16 July 2026                                                                  |
| Audit target  | ISO 9001 surveillance audit — 15 September 2026                               |
| Mission       | Prepare a leadership-ready, traceable action brief from the full evidence set |

## How to run the scenario

- Open QMSPilot Pilot and load the Northstar mission.
- Attach all evidence files in this pack in one review. The files intentionally include mixed formats.
- Ask Pilot to cross-reference the records, distinguish direct evidence from inference, and identify both concerns and clean controls.
- Do not assume every unusual detail is a finding. Some records are deliberately complete and current.
- Compare Pilot's result with the private engineering answer key after the review is complete.

## Recommended assignment

Review Northstar Precision Systems' audit-readiness evidence. Cross-reference the documents, identify what genuinely requires leadership attention, cite the exact file and record ID for each conclusion, and produce a prioritized action plan with accountable owners, dates, and objective closure evidence. Call out uncertainty where the evidence is incomplete. Do not invent nonconformities.

## Evidence included

| File                                         | Evidence type        | Purpose                                               |
|----------------------------------------------|----------------------|-------------------------------------------------------|
| 01_Company_and_QMS_Profile.pdf               | Context              | Business, process, system, and audit context          |
| 02_NPS-PR-004_Document_Control.docx          | Controlled procedure | Expected document-control practices                   |
| 03_IA-2026-02_Internal_Audit_Report.pdf      | Audit evidence       | Independent observations and sampled records          |
| 04_CAPA_Action_Register.xlsx                 | Live register        | Corrective-action status, ownership, and verification |
| 05_Management_Review_Minutes_2026-06.docx    | Leadership record    | Decisions, commitments, and QMS conclusions           |
| 06_Training_Matrix.xlsx                      | Competence evidence  | Training assignments and completion                   |
| 07_PM_and_Calibration_Records.xlsx           | Asset evidence       | Maintenance, calibration, and use records             |
| 08_SCAR-2026-007_Supplier_Nonconformance.pdf | Supplier evidence    | Containment, recurrence, and supplier response        |
| 09_CC-2026-014_Customer_Complaint.pdf        | Customer evidence    | Complaint investigation and disposition               |
| 10_Clean_Evidence_Packet.pdf                 | Negative controls    | Complete records that should not become findings      |
