

COMPANY PROFILE

# Northstar Precision Systems

Fictional manufacturer of precision-machined cooling and sealing assemblies for industrial equipment makers.

|            |                                                                             |
|------------|-----------------------------------------------------------------------------|
| Location   | Cedar Falls, Iowa                                                           |
| Employees  | 135 employees; two production shifts                                        |
| QMS scope  | Manufacture and final inspection of machined cooling and sealing assemblies |
| Audit date | ISO 9001 surveillance audit scheduled for 15 September 2026                 |

## Operating model

Northstar receives aluminum castings from approved suppliers, machines critical sealing and cooling features, performs in-process and final inspection, and ships finished assemblies to industrial original-equipment manufacturers. Product HX-410 accounts for approximately 28% of annual revenue and is produced primarily at machining center M-14 using HF-series hobbing and finishing equipment.

## Process and system map

| Process                      | Owner                   | Primary records / systems                                           |
|------------------------------|-------------------------|---------------------------------------------------------------------|
| Contract and customer review | Commercial Director     | ERP order record; customer specification register                   |
| Supplier quality             | Supply Chain Manager    | Approved supplier list; incoming inspection; SCAR log               |
| Production                   | VP Operations           | Released drawing; traveler; start-up verification; equipment record |
| Inspection and release       | Director of Quality     | Inspection plan; gauge record; final-release record                 |
| Competence                   | HR Manager              | Training matrix; qualification record                               |
| Improvement                  | Quality Systems Manager | Audit log; CAPA register; management review                         |

## Controlled information environment

QMS Vault is Northstar's authoritative repository for released QMS documents and production drawings. Revision C of the document-control procedure made the legacy shared drive archive read-only effective 1 May 2026. QMS Vault lists HX-410 Drawing Revision C as effective 10 June 2026. The shared drive remains available only for historical reference and migration reconciliation.

## Current leadership priorities

- Complete the surveillance-audit readiness package by 31 August 2026.
- Stabilize preventive-maintenance recordkeeping during the CMMS migration.
- Reduce repeat supplier-related burr defects on HX-410 castings.
- Move all open corrective actions into one accountable register with objective closure evidence.

## Performance snapshot

| Measure             | June 2026    | Target                     | Comment                                       |
|---------------------|--------------|----------------------------|-----------------------------------------------|
| On-time delivery    | 94.2%        | >=95%                      | Improving from 91.6% in March                 |
| Internal scrap      | 2.8%         | <=2.5%                     | HX-410 burr rework is the largest contributor |
| Customer complaints | 3 YTD        | <=6 annual                 | One open sealing complaint                    |
| Training completion | Reported 98% | >=98%                      | Source is management-review dashboard         |
| Open CAPA           | 6            | No overdue high-risk items | Two items reported overdue                    |

## Transition context

- QMS Vault and the legacy archive are in a controlled-document transition period.
- The maintenance team is reconciling work orders after a CMMS migration.
- Leadership dashboards summarize several detailed registers; source records remain the authoritative evidence for individual actions and qualifications.
- Northstar expects reviewers to identify contradictions and uncertainty rather than treating every missing field as proof of process failure.
