SCAR-2026-007 — Burr at coolant-port sealing surface

Supplier corrective-action request for repeat incoming defects on HX-410 castings.

Supplier	Apex Castings LLC
Opened	18 June 2026
Part / lot	HX-410 raw casting / AC-061426
Quantity	34 of 200 pieces rejected at incoming inspection
Response due	3 July 2026
Status	Containment accepted; corrective response incomplete

Problem description

Incoming inspection found residual burrs on the coolant-port sealing surface. The condition can interfere with gasket seating after machining. The defect is visually similar to SCAR-2026-002, which was closed on 28 March 2026 after the supplier added a final visual check.

Containment

Action	Owner	Date	Evidence / status
Quarantine lot AC-061426	Northstar Incoming Inspection	18 Jun	Lot blocked; 34 rejected
100% sort of Northstar stock	Apex Resident Technician	19 Jun	612 pieces screened; 11 additional pieces rejected
Inspect next three supplier shipments	Northstar Supplier Quality	From 20 Jun	Two shipments accepted after enhanced inspection

Supplier response received 1 July 2026

Response element	Supplier statement	Northstar review
Cause	Operator inconsistency during manual deburr and final visual inspection.	No process evidence or causal analysis attached; does not explain recurrence after SCAR-2026-002.
Correction	Reinstruct operators and remind inspectors to check all coolant ports.	Training roster not provided.
Corrective action	Add a quality alert at the deburr station.	Implementation date and control-plan change not provided.
Effectiveness	No additional defects expected.	No sampling plan, duration, metric, or acceptance criterion defined.

Northstar disposition

Containment remains active. Supplier Quality requested a revised response with verified cause, objective implementation evidence, and an effectiveness plan. No formal supplier escalation level or sourcing decision has been approved. The SCAR record is not currently linked to customer complaint CC-2026-014 or to a dedicated internal CAPA.
