

NEGATIVE CONTROLS

Complete and current sampled records

These records are included to test whether Pilot can recognize satisfactory evidence without manufacturing findings.

Packet date	10 July 2026
Prepared by	Northstar Quality Systems
Records	Gauge calibration; closed CAPA; approved supplier certificate

Record 1 — Calibration certificate CAL-26-188

Field	Value
Instrument	Digital bore gauge GR-882
Calibration date	18 June 2026
Next due	18 December 2026
Result	As found / as left within specification
Standards	Reference set RS-44; traceable to NIST through certificate LAB-889102
Laboratory	Midwest Metrology Services; ISO/IEC 17025 scope verified at time of service
Approval	Electronically approved by L. Novak, Metrology Lead, 19 June 2026

Record 2 — CAPA C-021 closure and effectiveness

Element	Evidence
Problem	Incorrect label applied to two internal transfer bins; no customer shipment affected.
Cause	Label template selected by description instead of controlled part number.
Action	Template library keyed to part number; obsolete templates removed; users trained.
Closure evidence	System change CR-2026-041; access log; training records for 12 affected users.
Effectiveness	Sixty-day sample of 240 transfer-bin labels found zero recurrence; reviewed 12 June 2026.
Approval	Closed effective by Quality Systems Manager and Warehouse Manager on 13 June 2026.

Record 3 — Approved supplier certificate

Field	Value
Supplier	Blue Ridge Anodizing
Approval scope	Type II and Type III anodize for non-HX-410 product families
Certificate	QMS certificate BR-9001-2451, valid through 31 March 2027
Performance review	98.7% acceptance; zero late deliveries; no open SCAR
Northstar approval	Annual review completed 4 April 2026; next review due April 2027

Validation note

A strong analysis may reference these records as evidence of effective controls or as contrast with weaker records elsewhere. It should not turn them into corrective-action findings without contradictory evidence.
